

YOUR PRETREATMENT HOUSE

DFH DISK FILTER

DESIGN & MANUFACTURED BY
FLUITECO® PRETREATMENT HOUSE

DFH A unique product, designed and manufactured to be versatile for any flow, reducing head loss and increasing capacity.

**HIGH EFFECTIVE
REMOVAL OF
TSS, BOD, AND
PHOSPHORUS!!!**

WHAT IT DOES?

APPLICATIONS

- Paper & Steel
- WWTP
- Drinking water
- Food & Beverage

HOW IT WORKS

Each disc comprises eight communicating sectors with a stainless steel filtering fabric capable of filtering down to a minimum of 5 microns! Upon entry, wastewater flows into the disks and is filtered through them. The purified water is then collected within the stainless steel tank. Simultaneously, as the discs rotate, high-pressure washing occurs, dislodging captured suspended solids, which then fall into a collection hopper. This entire process operates continuously, without interruption.

BENEFITS

- High Capacity
- Minimal maintenance
- Low consumption
- Low noise level
- High reliability
- Tank/Concrete Channel
